

YELLOW HYBRID MAIZE

CAP 9444 NG

EARLY

MEDIUM

LATE

Yellow semi flint hybrid

CAP 9444 NG medium maturing variety with approximately 120-134 days to maturity. It is moderately resistant to Leaf Blight (H.t), Rust and most common maize diseases. CAP 9444 NG is not recommended in areas with a high incidence of G.L.S., unless a strict preventative spray program is adhered to.

CAP 9444 NG will tolerate stressful drought conditions and has a yield potential of above 8 tons per hectare, out yielding major competitors in trials to date.

CAP 9444 NG can have up to 3 cobs per plant and produces good yields even under low plant populations.

- Very good standability
- Very dense grain
- High shelling percentage
- Good husk cover
- Hard orange grain
