

PERENNIAL RYEGRASS

Lindor II

Raigrás perenne

OVERVIEW

LINDOR II is an outstanding, diploid perennial ryegrass for forage production. It produces a high quality and healthy pasture and differs from other varieties because of its persistence and permanence in pastures.

LINDOR II is very well adapted to various environmental conditions including cold winters and dry summers.

LINDOR II has a well distributed dry matter production throughout its growth cycle and compared with its predecessors it has been observed to have higher yields in autumn and winter when forage supplies are at their lowest.

- Great performance
- Good persistence
- Highly adaptive
- Tolerates cold winters

Kgs of dry matter per hectare
